1 INTRODUCTION

The purpose of this document is to provide a detailed process and guide on the Unity Health Backups and Replications, including the monitoring of such to ensure all is running successfully.

2 MICROSOFT HYPER-V REPLICATIONS

Unity Health has two sets of Replications:

- ↪ Primary Replications which act as a failover within the **same** Datacentre.
- ↪ Secondary Replication (DR) which acts as the failover to a **second** Datacentre.

2.1 Microsoft Hyper-V Primary Replication

- ↪ Both Primary and Secondary Servers are situated at MTN Gallo Manor (Afrihost).
- ↪ On the Primary server, there are a total of three Virtual Machines namely, Ambledown VIP, Test Production and Production. These are replicated to the second Server with incrementals of every five minutes and with a total of 24 restore points.

Choose the frequency at which changes will be sent to the Replica server.

15 Minutes ▾

Configure additional recovery points for this virtual machine

☐ Maintain only the latest recovery point

☒ Create additional hourly recovery points

Coverage provided by additional recovery points (in hours): 24 ▾

☒ Volume Shadow Copy Service (VSS) snapshot frequency (in hours): 12 ▾

This option requires the latest Integration Components be installed in the guest. For non-Windows guest operating systems, these snapshots are file-system consistent.

Ambledown Production - (172.20.60.12)

Replication Mode: Primary
Replication State: Replication enabled
Replication Health: Normal

Primary Server: Ambledown02
Replica Server: AMBLEDOWNHOST03
Last synchronized at: 2021/05/13 8:18:56 AM

2.2 Veeam Backup and replication as Secondary Replication (Extended DR)

- ↪ On the secondary Server, there are a total of two Virtual Machines. These are replicated (extended replication) to the second Datacentre with a one hour incremental and with a total of 24 restore points.
- ↪ The second Datacentre, Paratus, is located in Windhoek, Namibia.

Edit Replication Job [Ambledown Production]

Schedule
Specify the job scheduling options. If you do not set the schedule, the job will need to be controlled manually.

Job
☒ Run the job automatically

Virtual Machines
☐ Daily at this time: 22:00 Everyday Days...

Destination
☐ Monthly at this time: 22:00 Fourth Saturday Months...

Job Settings
☒ Periodically every: 1 Hours Schedule...

☐ After this job: Daily Ness (Daily Ness)

3 FAILOVERS

3.1 Primary Replications Failover

- ↪ Primary failover will be implemented when one of the following occurs:
 - Virtual Machine failure
 - Windows Updates failure (resulting in server not starting)
 - Application failure
 - Databases deleted / corrupted
 - Primary Server failure
- ↪ **Sautech** will be the acting company responsible for initiating Primary Replication failover.

3.2 DR Replication Failover

- ↪ DR failover will be implemented when one of the following occurs:
 - MTN Gallo Manor (Afrihost) Datacentre is completely down
 - Primary and Secondary Server complete failure
 - Not being able to restore the Primary Services within stipulated period of DR Policy
- ↪ Additional conditions for implementing DR failover:
 - Unity Health's DR Policy should be active and valid:
 - DR failover will be implemented as per the period stipulated in the above-mentioned policy.
- ↪ **Unity Health** will be the acting company responsible for initiating DR Replication failover.

3.3 Backup Failover

- ↪ Backup Failover will be implemented when one of the following occurs:
 - All data is missing exceeding the time frame of available Primary and DR Replications
 - Data Encryption with all Primary and DR replications infected
- ↪ **Unity Health** will be the acting company responsible for initiating Backup Failover.
